Expected outcome

Challenges

Possible answers

Questions?

Constructive alignment

A well structured e-learning course

Active teaching and learning methods

Expected outcome

Will be exposed to a **number of innovative approaches and mechanisms** that they can use in their own positions **to enhance engagement** in both the assessed curricula and more widely in University life

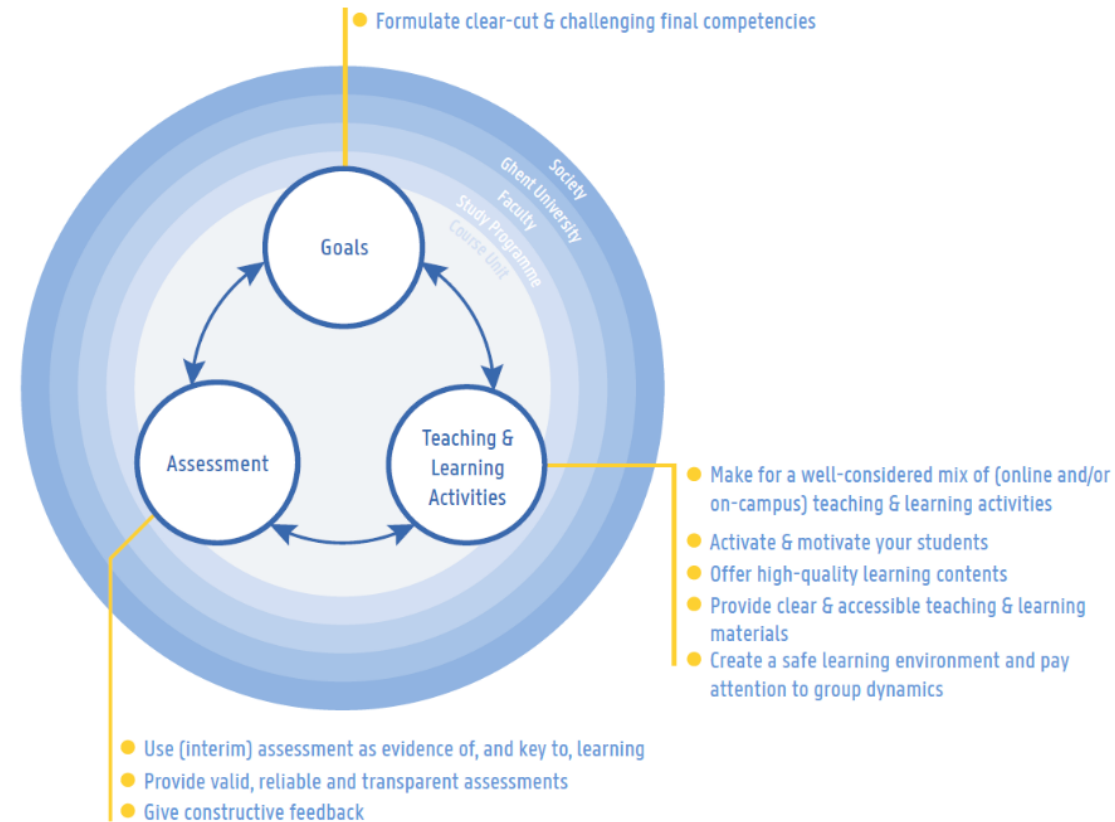

Challenges

We face the following challenges at our faculty:

- Get, especially Flemish, students out of their **wait-and-see and passive attitude**: "The lecturer will tell me everything I need to know."
- Get students to come **prepared** for the practicals in class.
- Ensure the **workload is doable** for the students and teachers when implementing active learning and teaching methods.
- Think about how to deal with a **large (larger) heterogeneity in prior knowledge** of students
- Think about how to respond to **changing expectations** from students about how, when and where they learn and the activities they are interested in and willing to engage with? And what to do with those who express this very assertively.

The Basics of Designing a Course Unit: Constructive alignment

A well structured e-learning platform

What do I believe is relevant to offer students online?

Teacher-centered

What does the student need?

Learner-centered (UX)

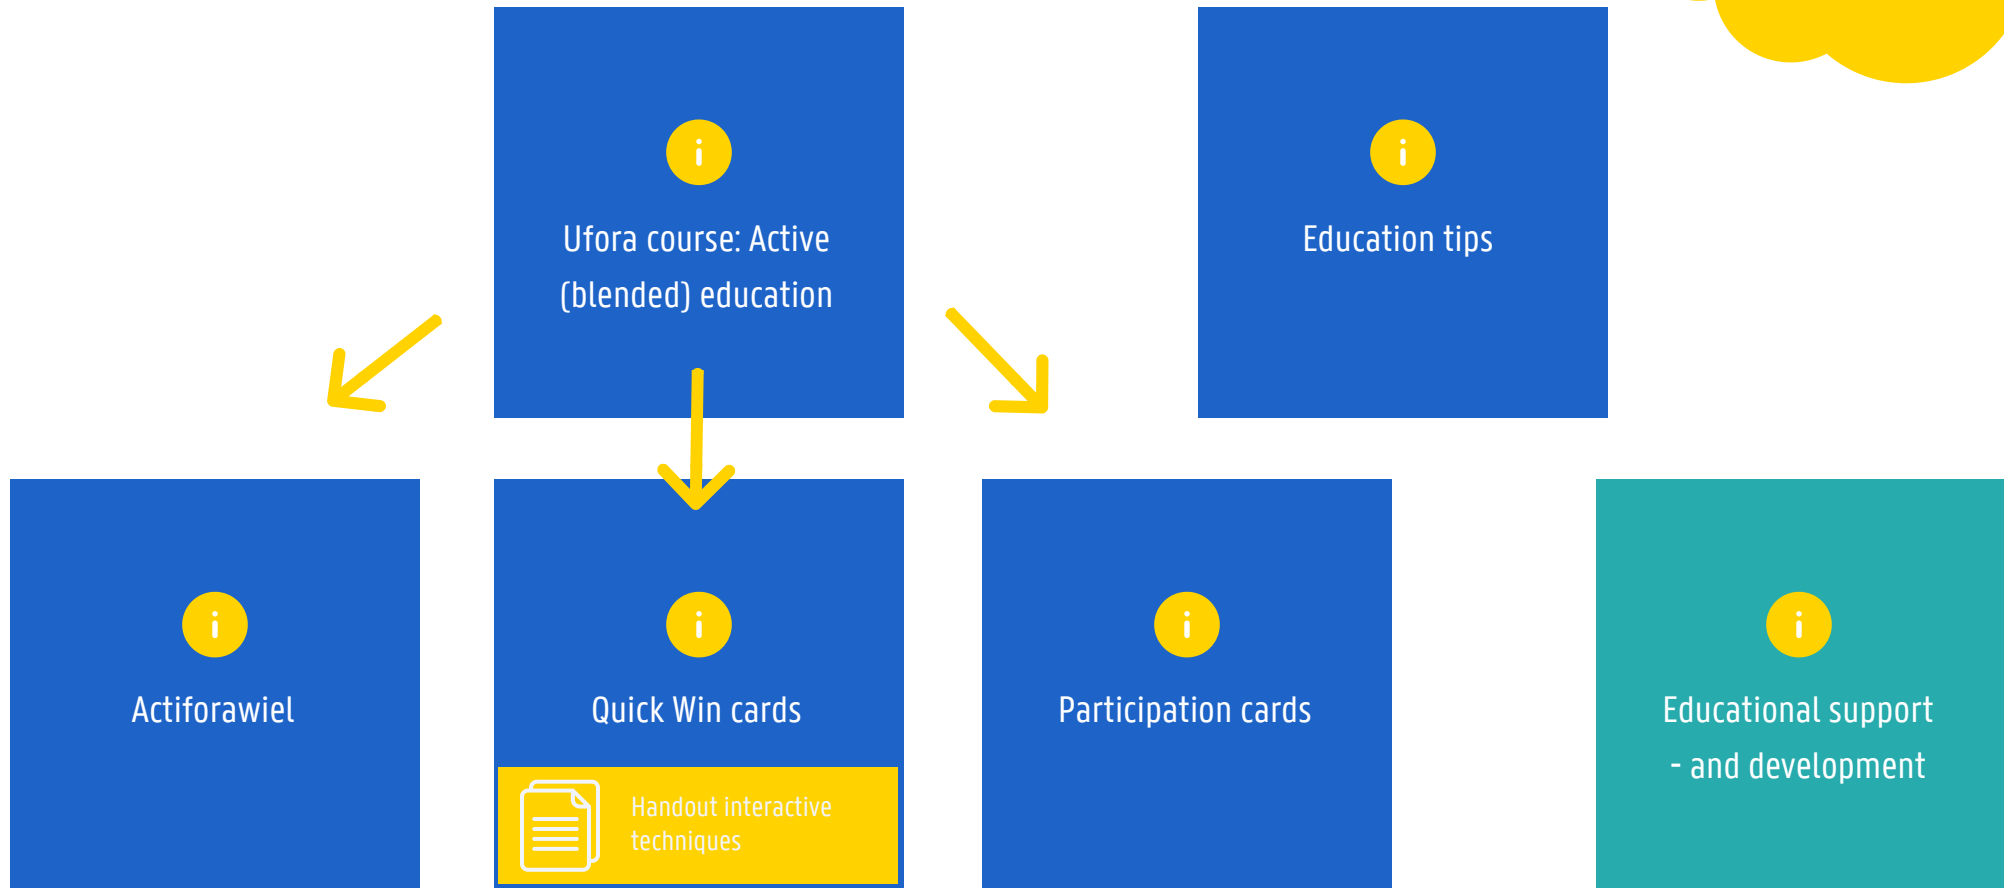

10 basic tips to create a clear Ufora course

Active teaching and learning methods

Share your knowledge and practices!

Time for questions
